

Further comments in support of Rep 1 with 6 audio files and 4 photos attached.

The amended opening times have no relevance to the submitted objections for this license application.

The public nuisance caused by gatherings of drinkers in the back yard of 19 High Street from 16:00 - 20:00 during 2018 -2019 will be much worse for the surrounding residential homes if this license is approved.

This application not only duplicates the previous use of the back yard area for gatherings of drinkers/smokers but it will make the noise situation far greater than anything residents experienced in 2019. There is no sound proofing and the small yard is surrounded by residential properties - some within 3M of the unit. Sound travels further late at night and the local acoustics add to its impact.

The constant noise of the incorrectly fitted commercial kitchen flue, extractor fan and additional extractor flue that have been positioned within 5M of to the neighbouring properties will add to the noise pollution and misery this license will bring to the many residential units that surround it.

Bear in mind we all need our sleep to function properly. The surrounding homes contain residents who are key workers, residents who work shifts, there are children, babies, young parents and vulnerable elderly residents of the care home. All those lives will be severely impacted were this license approved in a unit that is wholly unsuitable for the proposed purpose.

I have attached a number of recordings made around midnight for the committee to listen to. They show that this part of the high street, that backs onto residential properties, is silent after 9pm. The noise disturbance this license will unleash will result in a public nuisance and impact negatively on peoples' health and well being and must be refused to protect the public from harm.

Can you also please send the attached images of the narrow alleyway that leads to a number of residential units. The 2nd image shows the flats at the rear of the alleyway and beyond the blue car the boundary of the Suffolk Road properties. The acoustics from the alleyway increase the volume of sound over a wide area - hence the previous issues we all had with noise pollution from 19 High Street.

The unit is wholly unsuitable for the proposed function and operating schedule. A new usage, surrounded by residential homes, that requires random weapons checks for future patrons and a safe box for confiscated weapons is also wholly unsuitable for such a small unit, that shares boundaries with so many homes.
